

SEMENCES DE FRAISES GÉANTES "Giant" (Fragaria ananassa)

Description:

Make children happy and neighbors astounded, because these strawberries are the largest in the world. They actually grow larger than chicken eggs into large, sweet fruits. When ripe, the fruit has its typical red color.

Sowing:

Germination is ideally carried out in seeding containers or small flowerpots.

Light germinator! Simply press the seed on moist potting substrate (e.g. potting soil, re-planting soil, sowing soil or coconut humus) and cover with, for example paper towels. It is important to keep the soil evenly moist (no water logging). Germination is approximately 3 to 6 weeks and at a size of approximately 3 - 4 cm the young sprouts should be pricked out (re-planted).

Please note:

This is a natural product. Therefore, we do not guarantee a sprout or germ for seeds since the conditions under which sowing by the customer is made can not be assessed or influenced by us.

We wish you success and fun.
